

Main Flow:

1. Karoline navigates to her site
2. Karoline logs into her account.
3. Karoline accesses the admin section of her website (i.e. the Content Management System (CMS)).
4. Karoline accesses the list of existing cake types using the CMS.
5. Karoline selects the cake type she wishes to update.
6. Karoline updates the name of an existing cake type.
7. Karoline clicks the submit button.
8. The CMS sends the updated cake type information to the database.
9. The database receives the updated cake type information.
10. The database stores the updated cake type information in the related table.
11. The use case ends when the CMS receives data from the database that includes the updated cake type information.

Use Case 20: Update Cake Type
