

Main Flow:

1. Karoline navigates to her site
2. Karoline logs into her account.
3. Karoline accesses the admin section of her website (i.e. the Content Management System (CMS)).
4. Karoline accesses the list of existing payment type options using the CMS.
5. Karoline enters the new payment type name.
6. Karoline clicks the submit button.
7. The CMS sends the new payment type information to the database.
8. The database receives the new payment type information.
9. The database stores the new payment type information in the related table.
10. The use case ends when the CMS receives data from the database that includes the newly created payment type option.
